

# PROM in the Swedish National Cataract Register

---

MATS LUNDSTRÖM

# Catquest-9SF

---

It is a 9-item Rasch analyzed questionnaire

It measures “Activity limitations in daily life”

We use Catquest-9SF before surgery and 3 months after surgery as a postal questionnaire

- The response rate of the postal questionnaire is around 75%

Patients are offered to complete a paper form or a web form

Clinics are offered to participate in using Catquest-9SF during one month each year

- 40-50 clinics participate each year (about 2/3 of the clinics)

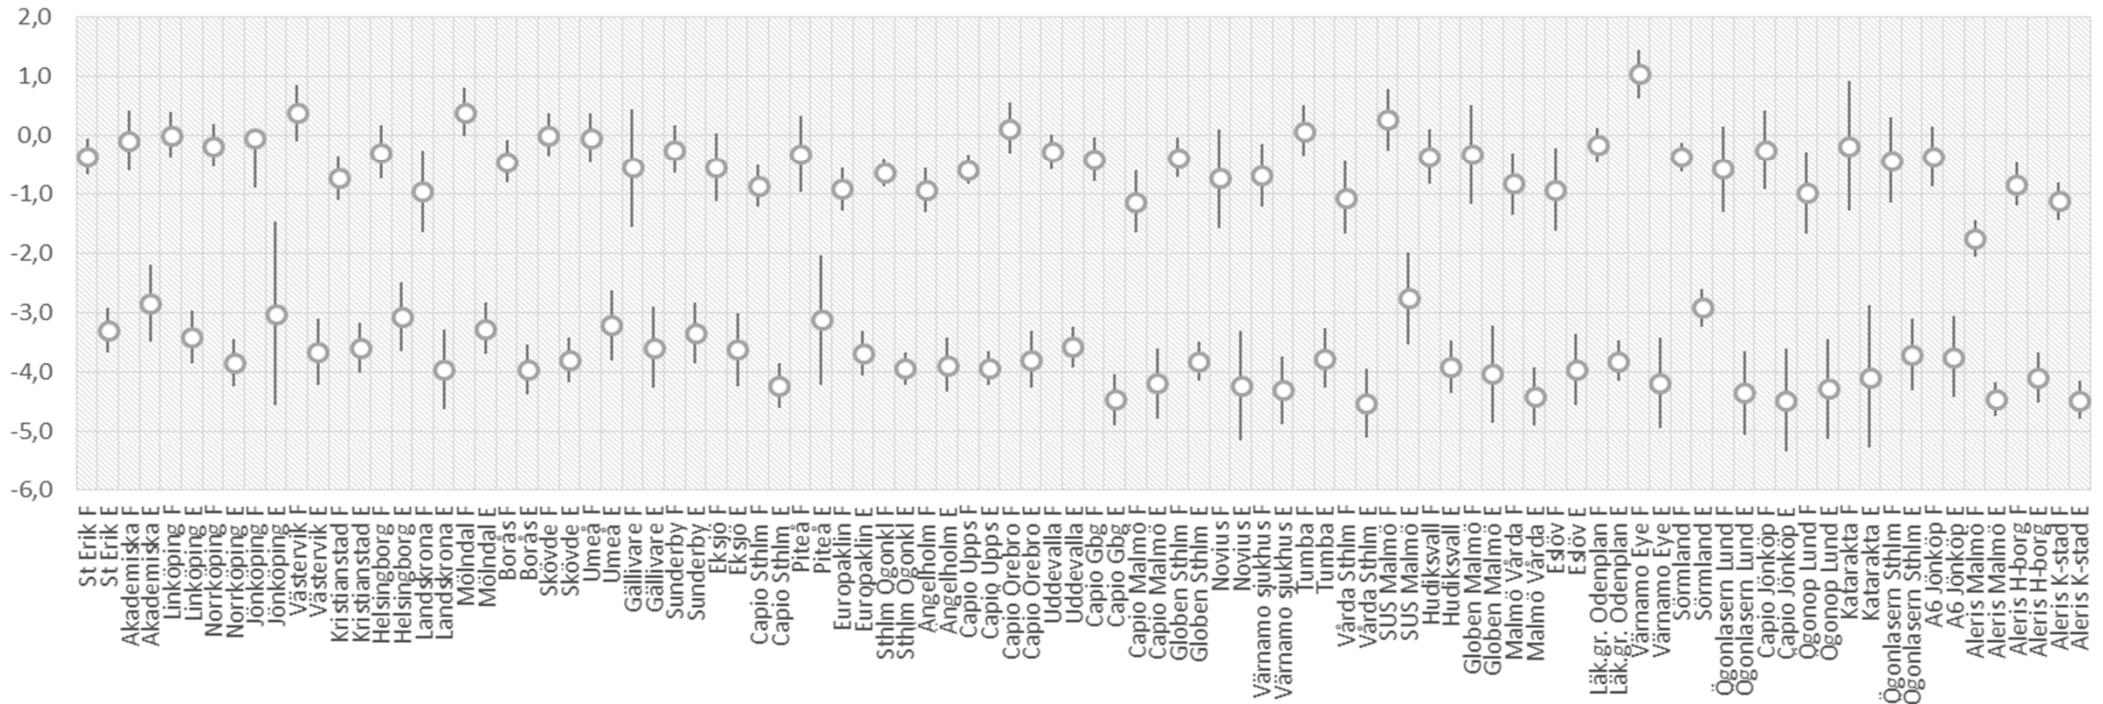

The clinics get feed back after the study period with own data and data from the total database for benchmarking

The result is also published openly (with clinic names) in our annual report

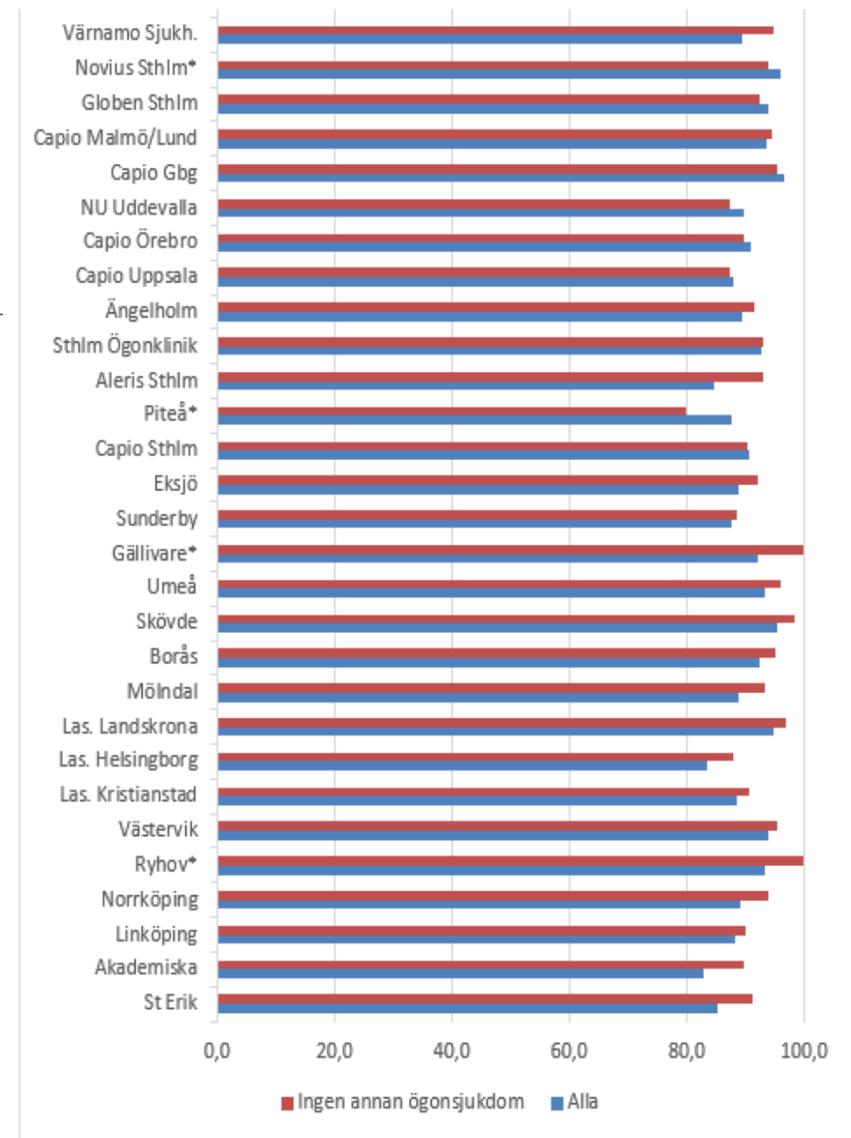

# Average Rasch persons score before and after surgery per clinic

Vertical lines = 95% confidence interval

Patienternas genomsnittliga självskattade besvär före (F) och efter (E) kataraktoperation (lodrät linje = 95 % konfidensintervall). Alla patienter.

# Percentage of patients with improved score after surgery per clinic

# Using Catquest-9SF for better outcomes

---

Clinical improvement work in a local clinic:

Behrad Samadi et al.: **Suggestions to improve patient-assessed outcome after cataract surgery**
